

Idaho Computer Science Kindergarten Course Syllabus

One Year for Elementary School, 36 Hours

Course Overview and Goals

The **Idaho Computer Science Kindergarten Course** introduces students to foundational programming concepts through **ScratchJr**, a block-based programming language. Students will develop computational thinking and problem-solving skills while learning to create interactive projects, animations, and games. This course emphasizes creativity and collaboration, providing students with a solid base in computer science concepts and digital literacy.

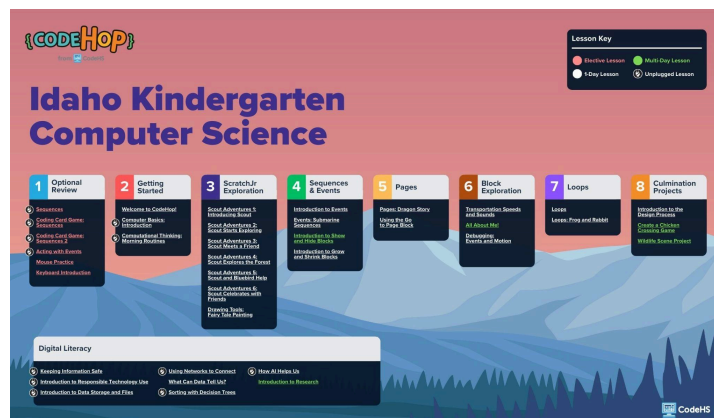

Learning Environment: This course is designed to be teacher-led, with ready-to-use lesson plans that follow a structured format: **Introduction, Guided Practice, Independent Practice, Extension, and Reflection**. Lessons are built with spiral review to reinforce key concepts and culminate in engaging projects to showcase student understanding.

The lessons are delivered in an **"I do, we do, you do"** format, ensuring a gradual release of responsibility and fostering confidence in students as they learn. Teachers can adapt the content to fit their schedule and instructional needs. The concepts taught in this course spiral across grade levels, ensuring that students can revisit and build upon their understanding year after year, even if all lessons are not completed within a single year. The course includes a total of 36 **lessons**, with each lesson approximately 30 minutes long. This provides a full school year of material if teaching one lesson per week. Optional digital literacy lessons are also available to complement the programming curriculum with non-programming computer and technology skills.

Programming Environment: Students will write and run programs in **ScratchJr** embedded and saved in the CodeHS platform. The environment supports interactive, hands-on programming, enabling students to create and debug projects in a user-friendly interface.

Prerequisites: There are no prerequisites for this course. It is designed to support all learners, regardless of prior computer science experience.

Course Breakdown

Optional Unplugged Exploration

In this unplugged unit, students explore foundational coding concepts without using a device. Through physical activities, games, and role-play, students learn how to sequence actions and understand how events trigger responses.

Objectives / Topics Covered	<ul style="list-style-type: none"> • Create step-by-step sequences. • Understand how events cause actions. • Practice direction-following using physical movement and games. • Develop collaboration and logical thinking skills. • Practice mouse and keyboard usage.
Lessons	<p>Sequences</p> <ul style="list-style-type: none"> • Create a sequence of step-by-step instructions for a dance to understand the importance of order. <p>Coding Card Game: Sequences</p> <ul style="list-style-type: none"> • Collaboratively guide Scout through a maze using sequence cards. <p>Coding Card Game: Sequences 2</p> <ul style="list-style-type: none"> • Tackle a new maze together using sequence coding strategies. <p>Acting with Events</p> <ul style="list-style-type: none"> • Act out cause-and-effect scenarios where events trigger specific actions. <p>Mouse Practice</p> <ul style="list-style-type: none"> • Demonstrate mouse skills through dragging and clicking in interactive games. <p>Keyboard Introduction</p> <ul style="list-style-type: none"> • Explore the keyboard by identifying letters, numbers, and basic functions.

Unit 1: Getting Started (2 lessons)

This unit introduces students to CodeHop and basic computer skills. Students explore how computers work and how to use the Playground to build computational thinking habits.

Objectives / Topics Covered	<ul style="list-style-type: none"> • Navigate the CodeHop Playground. • Understand computers and their parts. • Use computational thinking to identify patterns and sequences.
Lessons	<p>Welcome to CodeHop! (15 minute lesson)</p> <ul style="list-style-type: none"> • Learn to log in and explore the Playground; designed as a standalone or warm-up activity. <p>Computer Basics: Introduction</p> <ul style="list-style-type: none"> • Discover what computers are, how they function, and how input/output devices interact. <p>Computational Thinking: Morning Routines</p> <ul style="list-style-type: none"> • Analyze daily routines using patterns and sequencing.

Unit 2: ScratchJr Exploration (7 lessons)

This story-based unit introduces Scout the Squirrel and guides students through ScratchJr basics while building coding confidence through storytelling.

Objectives / Topics Covered	<ul style="list-style-type: none"> • Navigate the ScratchJr interface. • Add, delete, and modify elements. • Use motion and event blocks to animate characters. • Explore storytelling with visual programming.
-----------------------------	---

Lessons	<p>Scout Adventures 1: Introducing Scout</p> <ul style="list-style-type: none"> Explore the ScratchJr interface and add characters to begin Scout’s journey. <p>Scout Adventures 2: Scout Starts Exploring</p> <ul style="list-style-type: none"> Add backgrounds and a new page as Scout begins to explore the world around them. <p>Scout Adventures 3: Scout Meets a Friend</p> <ul style="list-style-type: none"> Delete and modify characters as Scout meets a new friend during the adventure. <p>Scout Adventures 4: Scout Explores the Forest</p> <ul style="list-style-type: none"> Use motion blocks to move characters around the stage as Scout explores the forest. <p>Scout Adventures 5: Scout and Bluebird Help</p> <ul style="list-style-type: none"> Build a sequence to collect items using motion blocks. <p>Scout Adventures 6: Scout Celebrates with Friends</p> <ul style="list-style-type: none"> Create a celebratory multi-scene animation using sequences and events. <p>Drawing Tools: Fairy Tale Painting</p> <ul style="list-style-type: none"> Use painting tools to design a custom character and background.
---------	---

Unit 3: Sequences, Events & Loops (6 lessons)

Students explore how sequences and events create interactivity and animation in programs, and begin using visual effects like appearing, disappearing, and size changes.

Objectives / Topics Covered	<ul style="list-style-type: none"> Build sequences and use event triggers. Make characters appear/disappear and change size. Animate with motion and events.
Lessons	<p>Introduction to Events</p> <ul style="list-style-type: none"> Create a simple program that uses different types of events to control how and when characters move. <p>Events: Submarine Sequences</p> <ul style="list-style-type: none"> Use event and motion blocks to program a character’s movement in an animated underwater scene. <p>Introduction to Show and Hide Blocks (2 part lesson)</p> <ul style="list-style-type: none"> Add show and hide blocks to make characters appear and disappear within a program. <p>Introduction to Grow and Shrink Blocks</p> <ul style="list-style-type: none"> Create an animated scene where characters change size using grow and shrink blocks. <p>Loops</p> <ul style="list-style-type: none"> Use loops and explain how loops are used to repeat code.

Unit 4: Pages (2 lessons)

Students expand their storytelling by using multi-page projects, learning how to control scene transitions with navigation blocks.

Objectives / Topics Covered	<ul style="list-style-type: none"> Create multi-page ScratchJr programs with different scenes. Use the “go to page” block to switch between pages within a project. Develop storytelling skills through sequencing and scene transitions.
Lessons	<p>Pages: Dragon Story</p> <ul style="list-style-type: none"> Create a multi-page story featuring a dragon, with different actions and scenes on each page. <p>Using the Go To Page Block</p> <ul style="list-style-type: none"> Build a program that switches between pages using the “go to page” block for interactive navigation.

Unit 5: Block Exploration (4 lessons)

This unit introduces blocks that enhance interactivity, storytelling, and personalization—fostering creative expression and debugging strategies.

Objectives / Topics Covered	<ul style="list-style-type: none"> ● Use sound, say, and speed blocks creatively. ● Create personal stories and animations. ● Debug and refine sequences with guidance.
Lessons	<p>Transportation Speeds and Sounds</p> <ul style="list-style-type: none"> ● Combine sound and speed blocks to animate different types of transportation. <p>All About Me! (2 part lesson)</p> <ul style="list-style-type: none"> ● Design a program that shares favorite things and personal interests. <p>Debugging: Events and Motion</p> <ul style="list-style-type: none"> ● Find and fix bugs in a program that uses event and motion blocks.

Unit 6: Loops (2 lessons)

Students learn how to use loops to simplify repetitive code and create animations efficiently.

Objectives / Topics Covered	<ul style="list-style-type: none"> ● Understand loops and repetition. ● Create animations using loops.
Lessons	<p>Loops</p> <ul style="list-style-type: none"> ● Use loops to repeat actions in a sequence. <p>Loops: Frog and Rabbit</p> <ul style="list-style-type: none"> ● Animate characters hopping with repeated motion using loops.

Unit 7: Culmination Projects (5 lessons)

Students apply all coding concepts in open-ended projects, showcasing creativity, design thinking, and problem-solving.

Objectives / Topics Covered	<ul style="list-style-type: none"> ● Use sequences, events, and loops in original projects. ● Apply the design process to create interactive experiences. ● Express creativity through animation and storytelling.
Lessons	<p>Introduction to the Design Process</p> <ul style="list-style-type: none"> ● Use structured steps to solve a simple problem through coding. <p>Chicken Crossing Game (2 part lesson)</p> <ul style="list-style-type: none"> ● Create an interactive game with adjustable speed and timing. <p>Wildlife Scene Project (2 part lesson)</p> <ul style="list-style-type: none"> ● Animate a nature scene using all core programming concepts.

Unit 8: Digital Literacy (8 lessons)

Students develop foundational digital literacy skills to use technology responsibly, understand data and AI, and conduct basic research.

Objectives / Topics Covered	<ul style="list-style-type: none"> ● Practice responsible technology use and safety. ● Understand private vs. personal information. ● Explore data storage and networking. ● Analyze and organize data. ● Learn about AI and digital research tools.
Lesson	<p>Keeping Information Safe</p> <ul style="list-style-type: none"> ● Identify private and personal info and strategies to protect it. <p>Introduction to Responsible Technology Use</p>

	<ul style="list-style-type: none"> Learn safe and responsible behaviors with classroom technology. <p>Introduction to Data Storage and Files</p> <ul style="list-style-type: none"> Understand how data is stored as files on digital devices. <p>What Can Data Tell Us?</p> <ul style="list-style-type: none"> Collect and analyze transportation data using charts. <p>Sorting with Decision Trees</p> <ul style="list-style-type: none"> Understand how AI uses data to sort and learn. <p>How AI Helps Us</p> <ul style="list-style-type: none"> Learn how AI assistants work and support real-life tasks. <p>Introduction to Research (2 part lesson)</p> <ul style="list-style-type: none"> Use safe research tools to find information on a topic and create a simple visual program to present what was learned.

Idaho Computer Science Kindergarten Course Supplemental Materials

Resources	Description
Parent Welcome Letter (Spanish)	Send this letter home to introduce families to computer science.
Warm-Up Activities	This warm-up activity slide deck provides 5-10 minute problems aligned with computer science skills to engage students at the start of class, allowing teachers to preview or review concepts with answer keys and discussion tips included in the Speaker Notes.
Program Self-Assessment (Spanish)	This is a student self-assessment tool designed to help K-6 learners reflect on their programming projects, evaluate their skills in algorithms, debugging, collaboration, and reflection, and set goals for improvement.
Peer Review Resources (Spanish)	This provides structured worksheets to facilitate student feedback during collaborative coding projects. It encourages reflection by guiding students to highlight successes, ask questions, and offer constructive feedback on their partner's work.
Lesson Reflection & Computational Thinking (Spanish)	This guides students in engaging with computational thinking concepts, preparing for discussions, reflecting on lessons, and applying their learning to real-world problem-solving.

All of these resources and more are found on the [Elementary Resources Page](#).
