Indiana 2nd Grade Computer Science Course Syllabus

One Year for Elementary School, 36 Hours

Course Overview and Goals

The Indiana Computer Science 2nd Grade Course introduces students to foundational programming concepts through block-based programming language. Students will develop computational thinking and problem-solving skills while learning to create interactive projects, animations, and games. This course emphasizes creativity and collaboration, providing students with a solid base in computer science concepts and digital literacy.

Learning Environment: This course is teacher-led and includes ready-to-use lessons following a consistent structure: Introduction, Guided Practice, Independent Practice, Extension, and Reflection. Instruction follows an "I do, we do, you do" model and incorporates spiral review to reinforce concepts and build confidence over time.

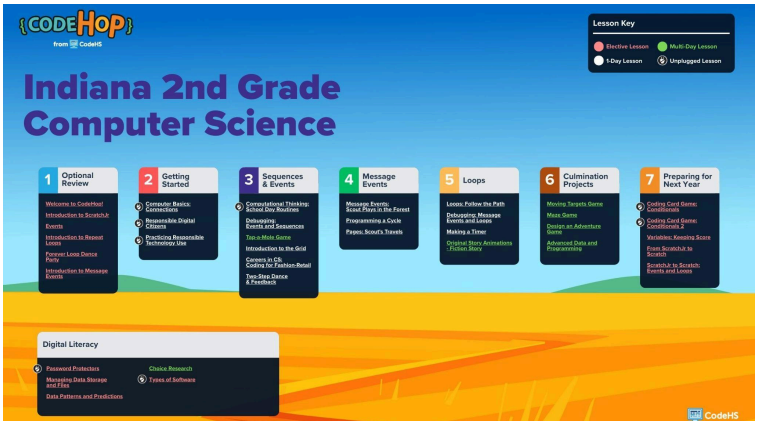

The course includes 36 lessons, each approximately 45 minutes long, providing a full year of instruction when taught once per week. While the course allows for instructional flexibility, some lessons are required to fully meet state computer science standards and are clearly identified within the syllabus. All Digital Literacy lessons are required to ensure full standards alignment, as they address essential non-programming computer science concepts. All lessons are labeled with the specific standards they address to support planning and compliance.

Standards Alignment Note: Standards addressed in each lesson are listed in parentheses after the lesson title. Standards may be reinforced across multiple lessons, and full coverage of state computer science standards is achieved through the course as a whole.

Programming Environment: Students will write and run programs that are saved in students' accounts. The environment supports interactive, hands-on programming, enabling students to create and debug projects in a user-friendly interface.

Prerequisites: There are no prerequisites for this course. It is designed to support all learners, regardless of prior computer science experience.

Course Breakdown

Optional Review (6 lessons)
In this unit, students review key programming concepts such as events and loops while practicing skills like scene creation, character interaction, and message-based coordination.

Objectives / Topics Covered	● Navigate the CodeHop interface and build animated scenes. ● Use event blocks and loops, including repeat and forever loops. ● Program character interactions using message events.
Lessons	**Welcome to CodeHop!** ● Log in and explore how to use the CodeHop Playground in a short introductory session. **Introduction to Programming** ● Navigate the CodeHop interface and create a scene with characters. **Events** ● Explain the concept of events in programming and use multiple event blocks in a project. **Introduction to Repeat Loops** ● Use repeat loops to run a section of code several times. **Forever Loop Dance Party** ● Create a sequence using a “repeat forever” loop to make characters continuously repeat actions. **Introduction to Message Events** ● Program a relay race where characters interact by sending and receiving messages.

Unit 1: Getting Started (3 lessons)
In this unit, students review computer fundamentals and learn how to be responsible digital citizens by understanding how technology works and how to use it safely.

Objectives / Topics Covered	● Identify computer components and how they work together. ● Understand digital citizenship, including safety, cyberbullying, and digital footprints. ● Practice responsible use of technology in school settings.
Lessons	**Computer Basics: Connections (K-2.CD.1, K-2.CD.2)** ● Learn what a computer is, how it works, and how input, output, hardware, and software function together. **Responsible Digital Citizens (K-2.IC.2, K-2.IC.3)** ● Explore what it means to be a responsible digital citizen, including digital footprints, cyberbullying, and how to report concerns. **Practicing Responsible Technology Use (K-2.IC.2, K-2.IC.3)** ● Demonstrate safe and respectful technology use through everyday examples. **Computational Thinking: School Day Routines (K-2.PA.5)** ● Use computational thinking to identify patterns, sequence steps, and simplify parts of the school day.

Unit 2: Sequences and Events (7 lessons)
In this unit, students apply sequencing and events to real-world and creative contexts, while practicing debugging, spatial reasoning, collaboration, and exploring careers in computer science.

Objectives / Topics Covered	● Apply computational thinking to routines and sequences. ● Use events to build interactive programs and games. ● Debug code, use the grid for movement, and collaborate with peers. ● Explore how coding supports careers like fashion design.
Lessons	**Debugging: Events and Sequences (K-2.PA.1, K-2.PA.2)** ● Find and fix errors in sequences and event-based programs. **Tap-a-Mole Game (2 classes | K-2.PA.3, K-2.PA.4)** ● Create an interactive game using tap events. **Introduction to the Grid (K-2.PA.1)** ● Use the grid to move characters to specific locations on the stage. **Careers in CS: Coding for Fashion-Retail (K-2.PA.1, K-2.PA.3, K-2.IC.1)**

	● Learn how coding supports fashion design and create a program to design and animate a fashion character. **Two-Step Dance & Feedback (K-2.PA.3, K-2.PA.6)** ● Create a dance-themed program, revise it based on peer feedback, and give attribution for help received.

Unit 3: Message Events (3 lessons)
In this unit, students explore how message events can be used to control program flow, model cycles, and connect actions across multiple pages.

Objectives / Topics Covered	● Use message events to trigger actions in sequence. ● Model repeating or connected processes using message-based logic. ● Link pages and events to create multi-step programs.
Lessons	**Message Events: Scout Plays in the Forest (K-2.PA.1, K-2.PA.3)** ● Use message events to control the order of actions in a program. **Programming a Cycle (K-2.PA.1, K-2.PA.3)** ● Model a repeating cycle by sending and receiving messages between characters. **Pages: Scout's Travels (K-2.PA.3)** ● Help Scout move between pages using message events to connect scenes.

Unit 4: Loops (5 lessons)
In this unit, students use loops to identify patterns, control timing, and animate stories, while debugging more complex programs involving message events and repeated actions.

Objectives / Topics Covered	● Create and debug programs using loops and message events. ● Use loops with wait and turn blocks to control timing. ● Animate original stories using sequences and repeated actions.
Lessons	**Loops: Follow the Path (K-2.PA.1, K-2.PA.3)** ● Identify patterns and create a program that uses loops to repeat movement along a path. **Debugging: Message Events and Loops (K-2.PA.1, K-2.PA.2, K-2.PA.4)** ● Find and fix problems in code that uses both message events and loops. **Making a Timer (K-2.PA.1, K-2.PA.3, K-2.PA.4)** ● Use loops, wait blocks, and turn blocks to build and compare two animated timers. **Original Story Animations – Fiction Story (2 classes | K-2.PA.1, K-2.PA.3)** ● Develop an original fiction story and animate it using programming tools.

Optional Culmination Projects (9 lessons)
In this unit, students synthesize their learning by designing interactive games and visual projects that combine sequences, events, loops, messages, and data collection.

Objectives / Topics Covered	● Design interactive games using core programming concepts. ● Apply sequences, loops, events, and messages across multi-page projects. ● Collect and visualize data in a creative program.
Lessons	**Moving Targets Game (3 classes | K-2.PA.1, K-2.PA.3, K-2.PA.4)** ● Create a game with moving targets using sequences, events, and multiple pages. **Maze Game Project (3 classes | K-2.PA.1, K-2.PA.2, K-2.PA.3, K-2.PA.4)** ● Build and refine a maze game using events, messages, loops, and sequences, incorporating peer feedback. **Design an Adventure Game (3 classes | K-2.PA.1, K-2.PA.2, K-2.PA.3, K-2.PA.4, K-2.PA.5)** ● Create a multi-page, story-driven adventure game using a combination of learned coding skills.

Digital Literacy (7 lessons)
In this unit, students develop digital literacy by exploring data storage, safe login practices, software use, data interpretation, and research skills.

Objectives / Topics Covered	● Understand secure login practices using usernames and passwords. ● Recognize how computers store and manage data. ● Interpret data patterns and present predictions using visual programs. ● Conduct research using reliable sources and communicate findings. ● Compare software tools for different computing tasks.
Lessons	**Password Protectors (K-2.IC.2, K-2.IC.3)** ● Learn the importance of usernames and passwords and how to keep login information secure. **Managing Data Storage and Files (K-2.DI.2, K-2.DI.3)** ● Understand how computers store information as files and model data collection and storage. **Data Explorers (K-2.DI.1, K-2.DI.4)** ● Collect data and create a program to visually present the results. **Data Patterns and Predictions (K-2.DI.4)** ● Identify patterns in data visualizations and create a program to communicate trends and predictions. **Choice Research (2 classes | K-2.DI.2, K-2.PA.3, K-2.PA.6)** ● Collect and evaluate sources to answer a research question and share findings through a visual program. **Types of Software (K-2.CD.3)** ● Compare different types of software and choose appropriate tools for completing specific tasks.

Optional: Preparing for Next Year (5 lessons)
In this unit, students prepare for more advanced programming by exploring conditionals, variables, and transitioning from CodeHopJr to CodeHop Blocks with foundational event and loop concepts.

Objectives / Topics Covered	● Use conditionals and variables in unplugged and digital activities. ● Explore the CodeHop interface and build simple programs. ● Apply event and loop knowledge when transitioning from CodeHopJr to CodeHop Blocks.
Lessons	**Coding Card Game: Conditionals (K-2.PA.3, K-2.PA.5)** ● Work collaboratively to guide Scout through a maze using sequences with conditionals. **Coding Card Game: Conditionals 2 (K-2.PA.3, K-2.PA.5)** ● Extend conditional logic in a second maze activity with more complex instructions. **Variables: Keeping Score (K-2.DI.2, K-2.DI.3)** ● Create a program that simulates scoring by using a variable. **From CodeHopJr to CodeHop Blocks (K-2.PA.3)** ● Navigate the basic CodeHop interface and create a simple introductory program. **From CodeHopJr to CodeHop Blocks: Part 2 (K-2.PA.3)** ● Build a program that includes both an event and a loop to animate actions.

2nd Grade Course Supplemental Materials

Resources	Description
Parent Welcome Letter (Spanish)	Send this letter home to introduce families to their new computer science curriculum.
Warm-Up Activities	This warm-up activity slide deck provides 5-10 minute problems aligned with computer science skills to engage students at the start of class, allowing teachers to preview or review concepts with answer keys and discussion tips included in the Speaker Notes.
Program Self-Assessment (Spanish)	This is a student self-assessment tool designed to help K-6 learners reflect on their programming projects, evaluate their skills in algorithms, debugging, collaboration, and reflection, and set goals for improvement.
Peer Review Resources (Spanish)	This provides structured worksheets to facilitate student feedback during collaborative coding projects. It encourages reflection by guiding students to highlight successes, ask questions, and offer constructive feedback on their partner's work.
Lesson Reflection & Computational Thinking (Spanish)	This guides students in engaging with computational thinking concepts, preparing for discussions, reflecting on lessons, and applying their learning to real-world problem-solving.
These resources and more are found on the **Elementary Resources Page**.
