

CodeHS

Introduction to Computer Science with JavaScript Corgi: 1 year for High School (125 contact hours)

Course Overview and Goals

The CodeHS introduction to computer science curriculum teaches the foundations of computer science and basic programming, with an emphasis on helping students develop logical thinking and problem-solving skills.

Learning Environment: The course utilizes a blended classroom approach. The content is fully web-based, with students writing and running code in the browser. Teachers utilize tools and resources provided by CodeHS to leverage time in the classroom and give focused 1-on-1 attention to students. Each unit of the course is broken down into lessons. Lessons consist of video tutorials, short quizzes, example programs to explore, and written programming exercises, adding up to over 100 hours of hands-on programming practice in total. Each unit ends with a comprehensive unit test that assesses students' mastery of the material from that unit.

Programming Environment: Students write and run JavaScript programs in the browser using the CodeHS editor.

Technology Requirements: To complete all activities and exercises in this course, students must have access to the 3rd party sites and tools listed here: Introduction to JavaScript Course Links

Prerequisites: This course is designed for complete beginners with no previous background in computer science. The course is highly visual, dynamic, and interactive, making it engaging for new coders.

More information: Browse the content of this course at https://codehs.com/course/17397.

Course Breakdown

Unit 1: Programming with Karel (3 weeks/15 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/23783

Objectives /	Topics
Covered	

- Commands
- Defining vs. Calling Functions
- Designing Functions
- Program Entry Points
- Control Flow
- Looping
- Conditionals
- Commenting Code
- Preconditions and Postconditions
- Top Down Design

Assignments / Labs	 Program-specific tasks for Karel the Dog Example Exercise: Pyramid of Karel Write a program to have Karel build a pyramid. There should be three balls on the first row, two in the second row, and one in the third row. Teach Karel new commands like turnRight() or makePancakes() Example Exercise: Pancakes
	Karel is the waiter. He needs to deliver a stack of pancakes to the guests on the 2nd, 4th, and 6th columns. Each stack of pancakes should have three pancakes. Create a function called makePancakes() to help Karel solve this problem. The world should end up exactly as shown here.
	 Solve large Karel problems by breaking them down into smaller, more manageable problems using Top Down Design Example Exercise: The Two Towers In this program, Karel should build two towers of tennis balls. Each tower should be 3 tennis balls high. At the end, Karel should end up on top of the second tower, facing East.
	 Using control structures and conditionals to solve general problems Example Exercise: Random Hurdles Write a program that has Karel run to the other side of first row, jumping over all of the hurdles. Karel should only jump if there is a hurdle blocking the way. However, the hurdles can be in random locations. The world is fourteen columns long. You must write a function named jumpHurdle() as part of your solution.

Unit 2: Karel Challenges (1.5 weeks, 7 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/23784

Objectives / Topics Covered	Solving large and more complex problems using Karel
Assignments / Labs	S Karel challenges to tie everything learned in the Karel module together Example Exercise: Super Cleanup Karel Karel's world is a complete mess. There are tennis balls all over the place, and you need to clean them up. Karel will start in the bottom left corner of the world facing east, and should clean up all of the tennis balls in the world. This program should be general enough to work on any size world with tennis balls in any locations.

Unit 3: JavaScript Basics (1 week/5 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/24071

Objectives / Topics Covered User Input Arithmetic Expressions Constants Collaborative Programming Random Numbers

	• Functions
Assignments / Labs	 12 JavaScript programming exercises in total Using variables and getting user input using JavaScript Example Exercise: Dinner Plans Prompt the user for their name, then ask them what time you should meet for dinner. Greet them by name and tell them you will meet them at the time they specified!

Unit 4: The Canvas and Graphics (1 week/5 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/24072

Objectives / Topics Covered	 JavaScript Canvas JavaScript Graphics Positioning Graphics Objects
Assignments / Labs	 7 JavaScript programming and graphics exercises in total Example Exercise: Create Your Own Meme In this exercise, you are going to create your own meme! The only requirements are that you add at least one image and one text element.

Unit 5: Graphics Challenges (1 week, 5 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/24232

Objectives / Topics Covered	Solving large and more complex problems using graphics
Assignments / Labs	3 graphics challenges to tie everything learned in the JavaScript & Graphics module together

Unit 6: JavaScript Control Structures (3 weeks/15 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/23787

Objectives / Topics Covered	 Booleans If/Else Statements Logical Operators Comparison Operators Conditionals While Loops Break Statements For Loops Nested Control Structures
Assignments / Labs	 31 control structures programming exercises in total Using comparison and logical operators to control the flow of the program

 Example Exercise: Inventory Write a program that keeps track of a simple inventory for a store. While there are still items left in the inventory, ask the user how many items they would like to buy. Then print out how many are left in inventory after the purchase. You should use a while loop for this problem. Make sure you catch the case where the user tries to buy more items than there are in the inventory. In that case, you should print a message to the user saying that their request isn't possible. Using for loops Example Exercise: Jukebox ■ In the days before the internet, many restaurants would have a jukebox that allowed customers to choose what music they wanted to play. Customers would enter a coin and choose from the jukebox's music collection by selecting a song's number. You could choose one song per coin. In this exercise, you will create a digital jukebox where the user can enter any number of quarters to create a playlist of songs. Drawing basic graphics using JavaScript Example Exercise: Caterpillar This graphics program should draw a caterpillar. A caterpillar has NUM_CIRCLES circles. Every other circle is a different color, the even circles are red, and the odd circles are green (by even we mean when i is an even number). Use a for loop to draw the caterpillar, centered vertically on the screen. Also, be sure that the caterpillar is

Unit 7: Control Structures Challenges (1 week, 5 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/23788

Objectives / Topics Covered	Solving large and more complex problems using control structures
Assignments / Labs	 3 challenges using control structures to tie everything learned in the JavaScript Control Structures module together Example Exercise: Guessing Game The computer picks a number between 1 and 100, and you have to guess it. The computer will tell you whether your guess was too high, too low, or correct. Your assignment is to generate a random number and let the user guess numbers until they guess the correct number. Make sure to let the user know what they should do at the beginning of the program!

NUM_CIRCLES is changed.

still drawn across the whole canvas even if the value of

Unit 8: Functions (2 weeks/10 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/24215

Objectives / Topics Covered	 Parameters Return Values Default Parameters Scope
--------------------------------	--------------------------------------------------------------------------------------------------

• Using parar	
	In order to check if the inputted integer is even or odd, you should define and call a function named `isEven()`. This function should return a Boolean value of `true` or `false` depending if the number is even or not.

Unit 9: Functions Challenges (1 week/5 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/23790

Objectives / Topics Covered	Solving large and more complex problems using functions
Assignments / Labs	3 challenges using functions to tie everything learned in the Functions module together

Unit 10: Animation and Games (3 weeks/15 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/23791

Objectives / Topics Covered	 Timers Randomizing Games Mouse Events Keyboard Events
Assignments / Labs	 19 animations programming exercises in total Throughout the lessons in this module, you will be developing a simple game that incorporates basic animation techniques and input events. Using timers to add randomizations to graphical programs Example Exercise: Paint Splatter Write a program that splatters paint on the screen every DELAY milliseconds. To splatter paint, pick a random color and draw CIRCLES_PER_SPLATTER circles of that color at random places on the screen. The radius of each circle should be a random value between MIN_RADIUS and MAX_RADIUS. Remember to use helper functions. Using mouse events for interactive programs Example Exercise: Target

Draw a target on the screen that moves to aim at where your mouse is located. A target consists of a horizontal line that goes from 0 to the window width and a vertical line that goes from 0 to the window height. The lines should cross paths where the mouse is. If you're feeling adventurous, you can extend this to draw a small red circle whenever you click. If you're feeling really adventurous, you can have a bouncing ball on the screen and see if you can remove it when it gets clicked. You can use remove(obj) to remove something from the screen and getElementAt(x, y) to get an object at the given position. It will return the object or will return null if there is no object there. Using keyboard events for interactive programs Example Exercise: Basic Snake Write a basic version of the snake game. The way our game works is by first creating a green square at the center of the screen. The snake should be moving to the right. If you hit an arrow key, you should change the snake's direction.

Unit 11: Animations Challenges (1 week/5 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/23792

Objectives / Topics Covered	Solving large and more complex problems using animation
Assignments / Labs	2 challenges using animation to tie everything learned in the Animation & Games module together

Unit 12: Project: Breakout (2 weeks/10 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/23793

Objectives / Topics Covered	 Basic graphics Mouse events Collision detection
Assignments / Labs	 Guided exercises to build a Breakout Game Breakout is made up of bricks at the top of the screen, a paddle that you control at the bottom of the screen, and a ball that bounces around. Your goal is to direct the paddle with your mouse to bounce the ball until all of the bricks have been hit and disappear.

Unit 13: Final Project (2-4 weeks/10-20 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/23794

Objectives / Topics	Collaborative Programming
---------------------	---------------------------

Covered	Project PlanningPseudocode
Assignments / Labs	 Collaborative open-ended final project which encourages creativity Program Requirements: Your program:

Unit 14: Final Exam (2 hours)

Browse the full content of this unit at https://codehs.com/course/17397/explore/module/23795

Objectives / Topics	 Programming with Karel, JavaScript Basics, The Canvas and Graphics,
Covered	Control Structures, Functions, Animation and Games
Assignments / Labs	 Final Exam Pt 1: Multiple Choice Final Exam Pt 2: Free Response (Offline Assessment)

Optional Supplemental Materials (Remainder of school year)

These supplemental materials should be used following the Prerequisite Units mentioned:

Supplementary Units	Prerequisite/Recommended Unit(s)	# of activities
Midterm Exam	Programming with Karel, JavaScript and Graphics, Control Structures	1
Practice: Karel	Programming with Karel and Karel Challenges	23
Practice: Functions	Functions & Parameters	7
Practice: Console Challenges	Functions	17
Practice: Graphics and Animation	Javascript Control Structures	10
More Graphics and Animation - Snake Game - Graphics Challenges	Animation & Games	11
Extension: Visualizing Music	Data Structures (array)	9
Extension: Data Structures - Arrays - Lists - Objects - Sets - Grids	Complete all units in main course, including Breakout	78

Practice: Data Structures Challenges	Data Structures	6
Project: Tic Tac Toe	Data Structures	4
Project: Helicopter Game	Data Structures	24
