

# Curriculum Pathway Grades 6-12

CodeHS helps schools and districts build a comprehensive Middle School to High School computer science pathway starting from introductory level block-based programming courses all the way to college-level text based courses in many languages.

There are many ways your school can create a pathway. CodeHS provides many courses that can be offered in combinations of years. We also have more courses than you'd need for a linear pathway which allows you to mix and match or offer multiple courses for students to take.

6th	7th	8th	9th	10th	11th	12th
<b><u>Karel the dog</u></b>
